

— ENTERPRISE PROJECT & PORTFOLIO PLATFORM

Seven departments. One line of sight.

— Orchestrate

Your departments run their own projects and research their own way. Orchestrate brings every milestone, gate and R&D initiative into a single governed view — so your central office steers in real time instead of chasing status across borders.

THE CHALLENGE

Growth multiplies projects. It shouldn't multiply blind spots.

Across borders, every department adopts its own tools, trackers and rhythms. By the time status reaches your central office it has been stitched together from exports and inboxes — partial, late, and hard to trust. Oversight gets harder at exactly the moment the stakes get higher.

TODAY — WITHOUT ORCHESTRATE

Seven departments, seven islands

- Status scattered across spreadsheets, slides and personal trackers
- The central office requests updates instead of simply reading them
- A slipping milestone only surfaces weeks after it slipped
- R&D stays dark between formal gate reviews
- No single figure leadership can confidently stand behind

WITH ORCHESTRATE

One platform, full oversight

- Each department works inside its own governed space
- Every project and gate rolls up to one live portfolio view
- Milestones and stage-gates carry automatic, owner-routed alerts
- R&D pipelines are visible from first concept to release
- One governed source of truth, shared by every level

THE OUTCOME

Less manual effort

Retire status-chasing and tool sprawl for one system your teams keep current because it's worth keeping current.

Scales with you

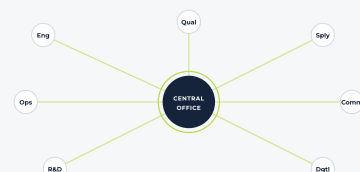

Add departments, regions and projects without re-engineering how the portfolio works underneath.

Decisions on live data

Catch a drifting milestone or a stalled R&D gate while there is still time to act on it.

Seven departments. One central office.

Each unit runs independently. Orchestrate rolls every project and R&D effort up into one live command view for your office.

Built for milestones and R&D — not transactions.

Governed department spaces

Every department gets its own secure workspace for projects, owners and timelines — running independently, never colliding with another unit's work.

Live portfolio command view

One real-time roll-up of all seven departments — status, momentum and at-risk work — that you slice by unit, region or initiative in a click.

Milestones & stage-gates

Work advances through defined gates with named owners and dates. Progress you measure against checkpoints, instead of inferring it from an inbox.

Built-in R&D pipeline

Purpose-built for research: move concepts through phases and review gates, with the maturity of every initiative readable at a glance.

Alerts & governance

The platform flags a slipping milestone or a due gate the moment it happens — while role-based access keeps each unit's data firmly in its own lane.

Borderless by design

Multiple languages, regions and time zones in one consistent system — built for operations that don't pause at a national border.

— AI AGENT · BUILT IN

Your portfolio, answerable in plain language.

An agent that reads across all seven departments. Ask it anything — it surfaces risks, drafts board summaries, and flags drift well before the next review.

Orchestrate Agent

Shaped around your operations, not a template.

Orchestrate isn't shrink-wrapped software. We model it on your departments, your gates and your R&D process — built on enterprise-grade Microsoft foundations so it is governed, secure and ready to scale from the first release.

01

Discover

We map how your seven departments actually work today, and where the central office is losing line of sight.

02

Design

A tailored blueprint — workspaces, gate model, R&D pipeline and the command view — shaped to your reality, not a template.

03

Build

Delivery in focused increments, so you are steering working software within weeks rather than reviewing slideware.

04

Scale

Roll out department by department and region by region, with governance and support that grow alongside you.

— ENGINEERED ON

Enterprise-grade **Microsoft Power Platform & Copilot Studio** — governed access per department, the **AI agent layer** built in, and clean integration with the systems you already run.

Let's map Orchestrate to how **IPPN actually runs.**

Give us 30 minutes on how your departments work and what oversight needs to mean for your central office. We come back with a concrete, tailored concept — not a demo script.
